# Release Notes

v1.0    February 27, 2015    Tiffanie Shakespeare    New spec

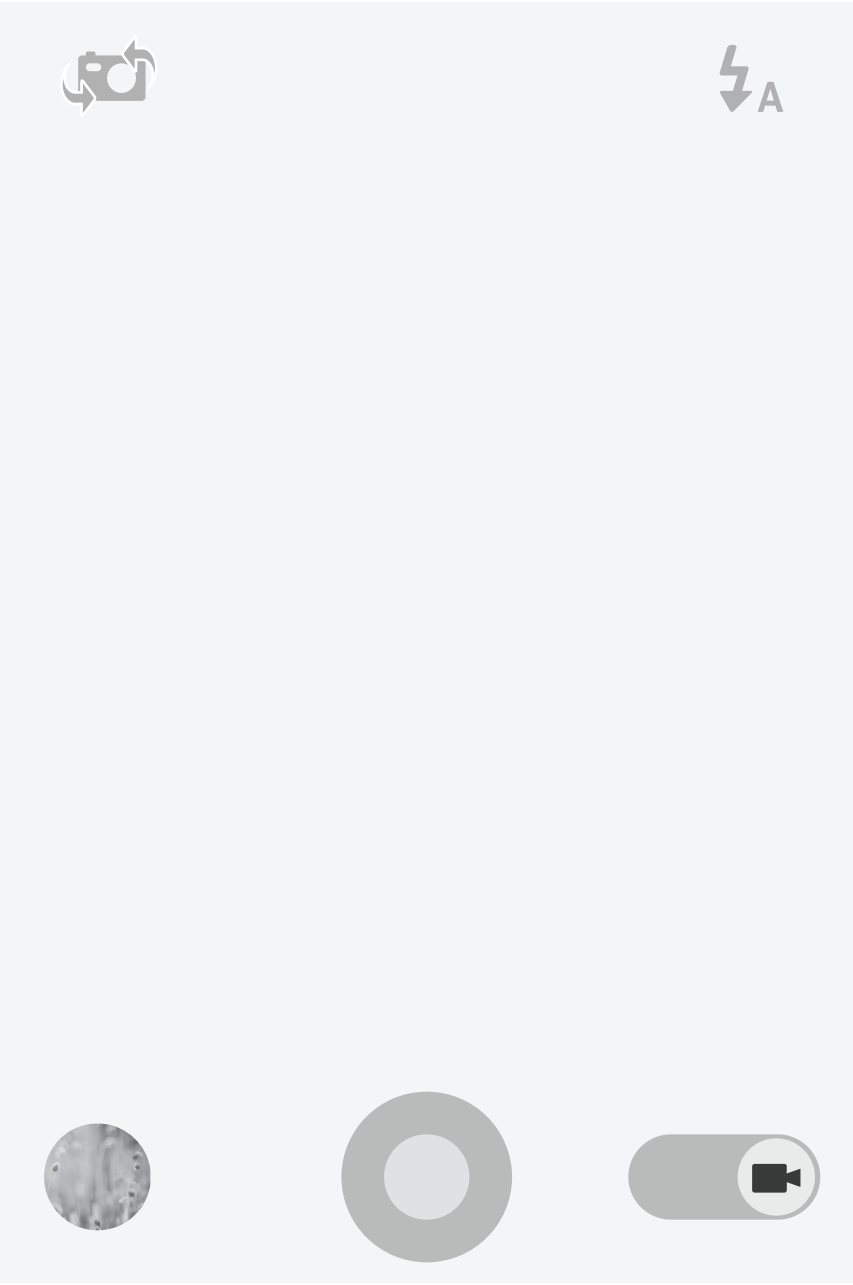

# Hardware Volume Key

Photo Mode

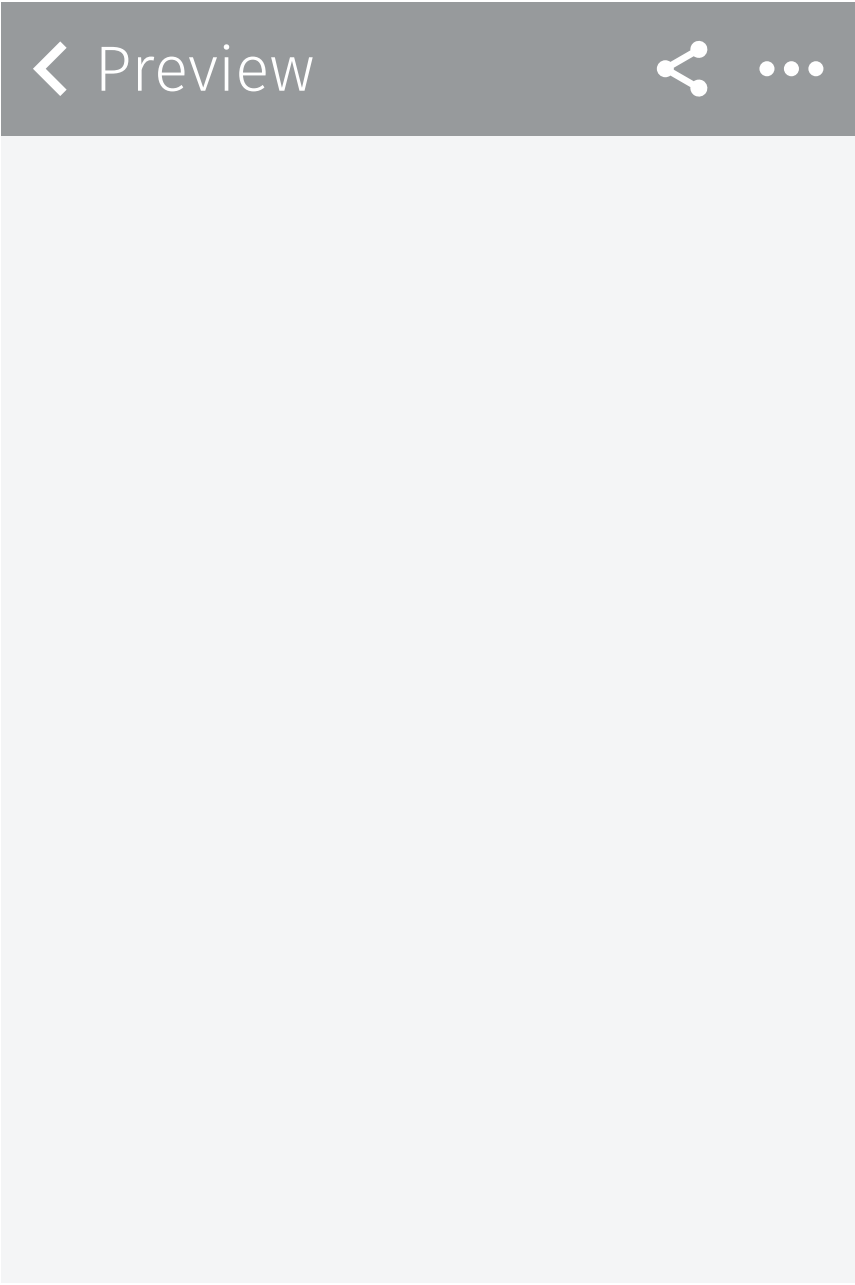

When in viewfinder, interacting with the volume key should snap a single photo.

Video Mode

When in viewfinder, interacting with the volume key should start/stop recording.

Preview

When in preview, interacting with the volume key should dismiss preview and return to the viewfinder.

## Notes

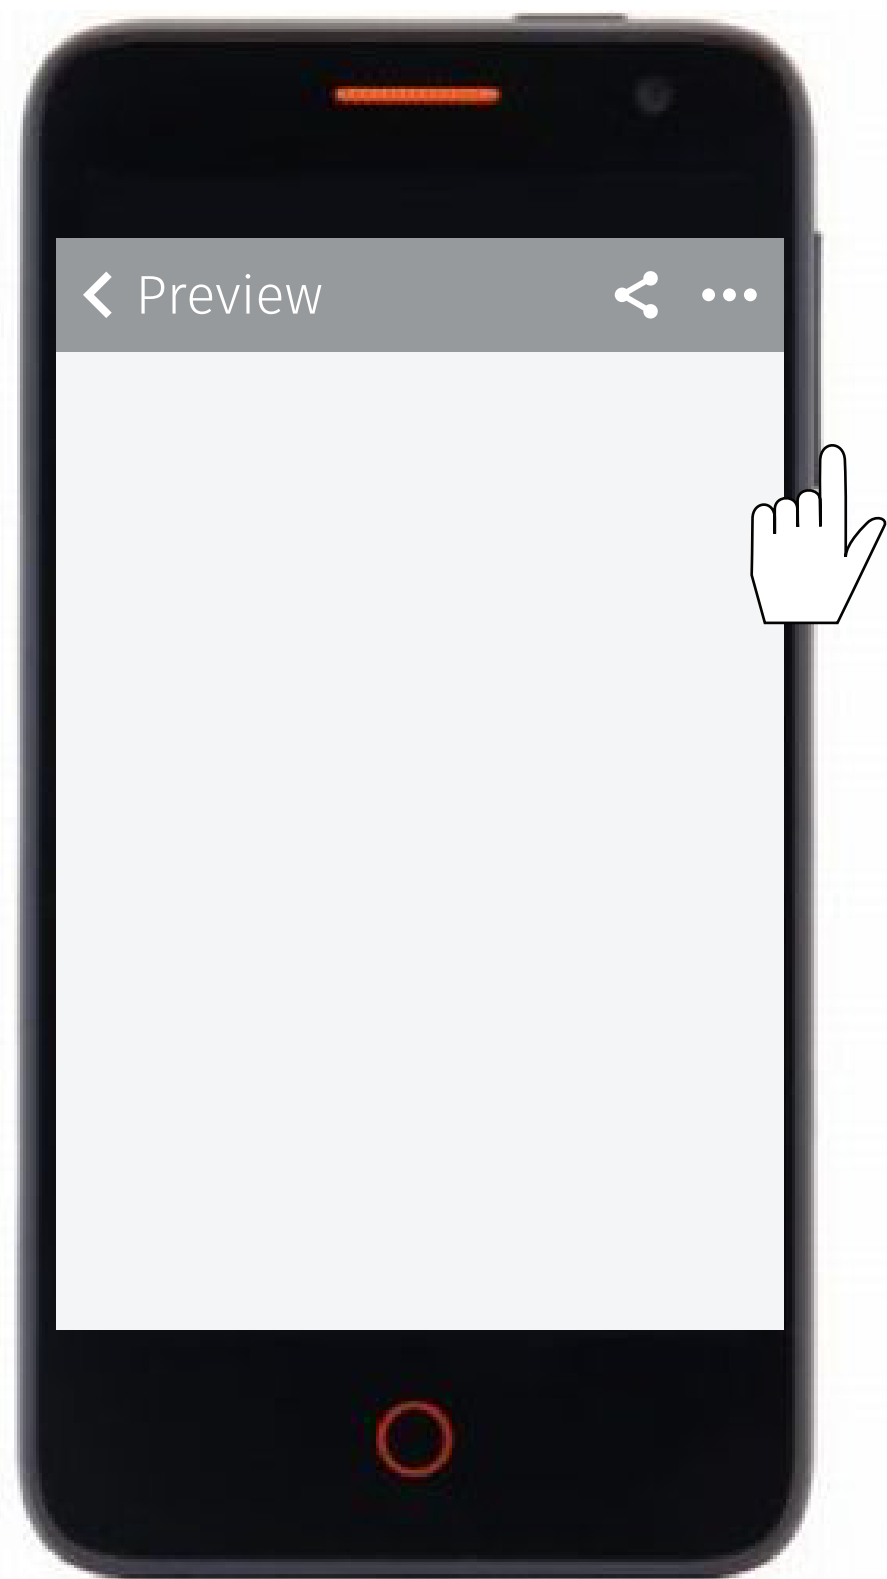

**Volume Key**  
Is the physical hardware button that controls the volume setting. Wihtin the camera application, the volume key will NOT control volume settings.

In video and photo mode, the rocker will behave as the capture button. In preview, the key will dismiss preview.

**Optional Feature**  
This feature may be disabled by the manufacturer. Since this is hardware dependent, we need to provide an option to disable this feature for those devices where it doesn't make sense (e.g volume rocker is on the back).

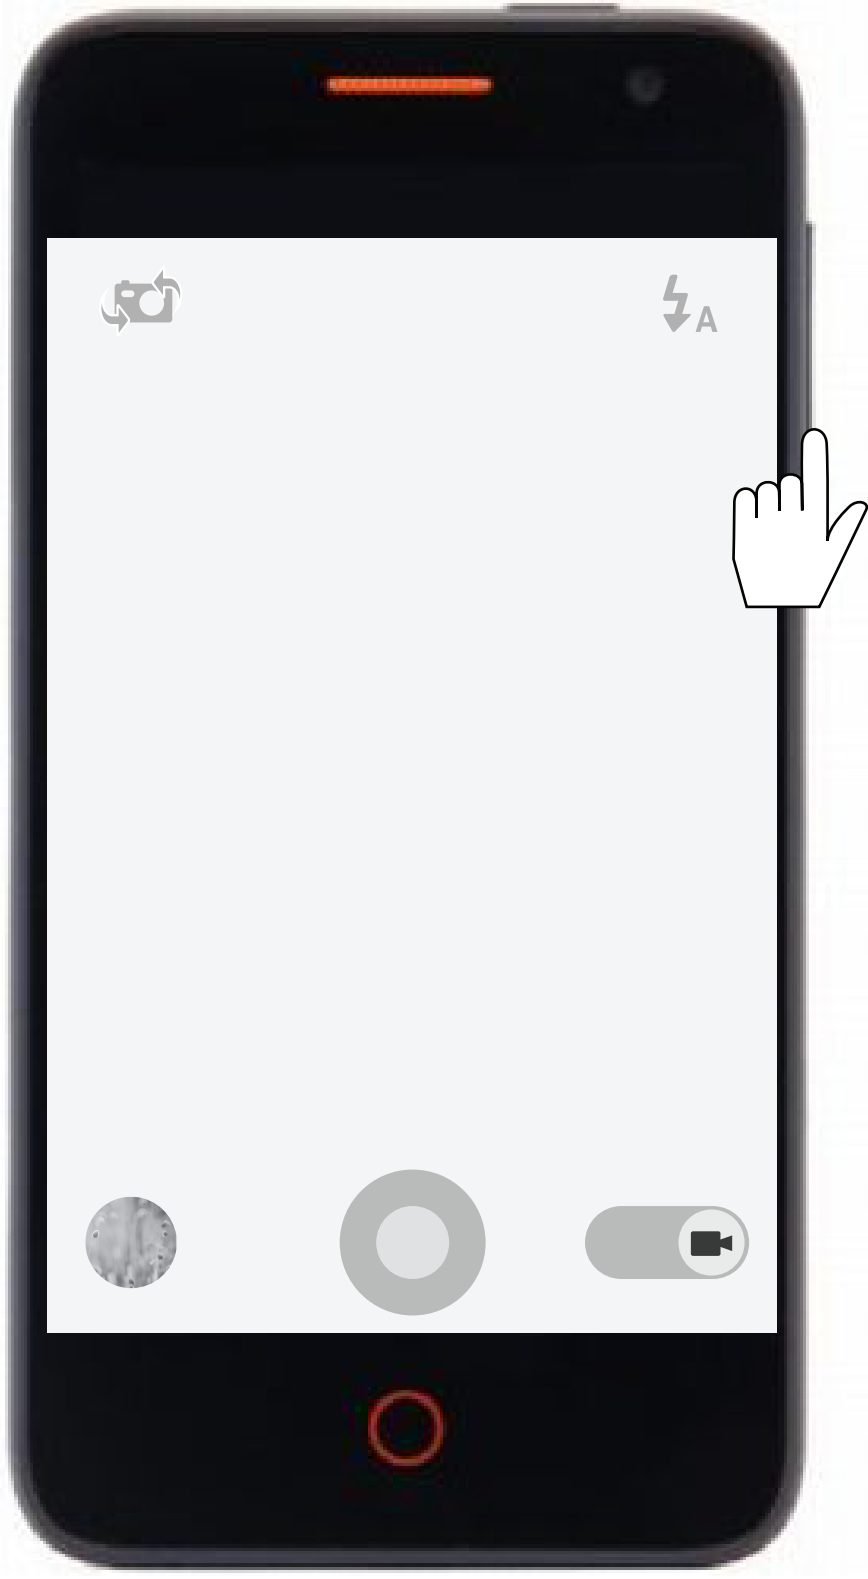

# Volume Key in Preview

1. Preview

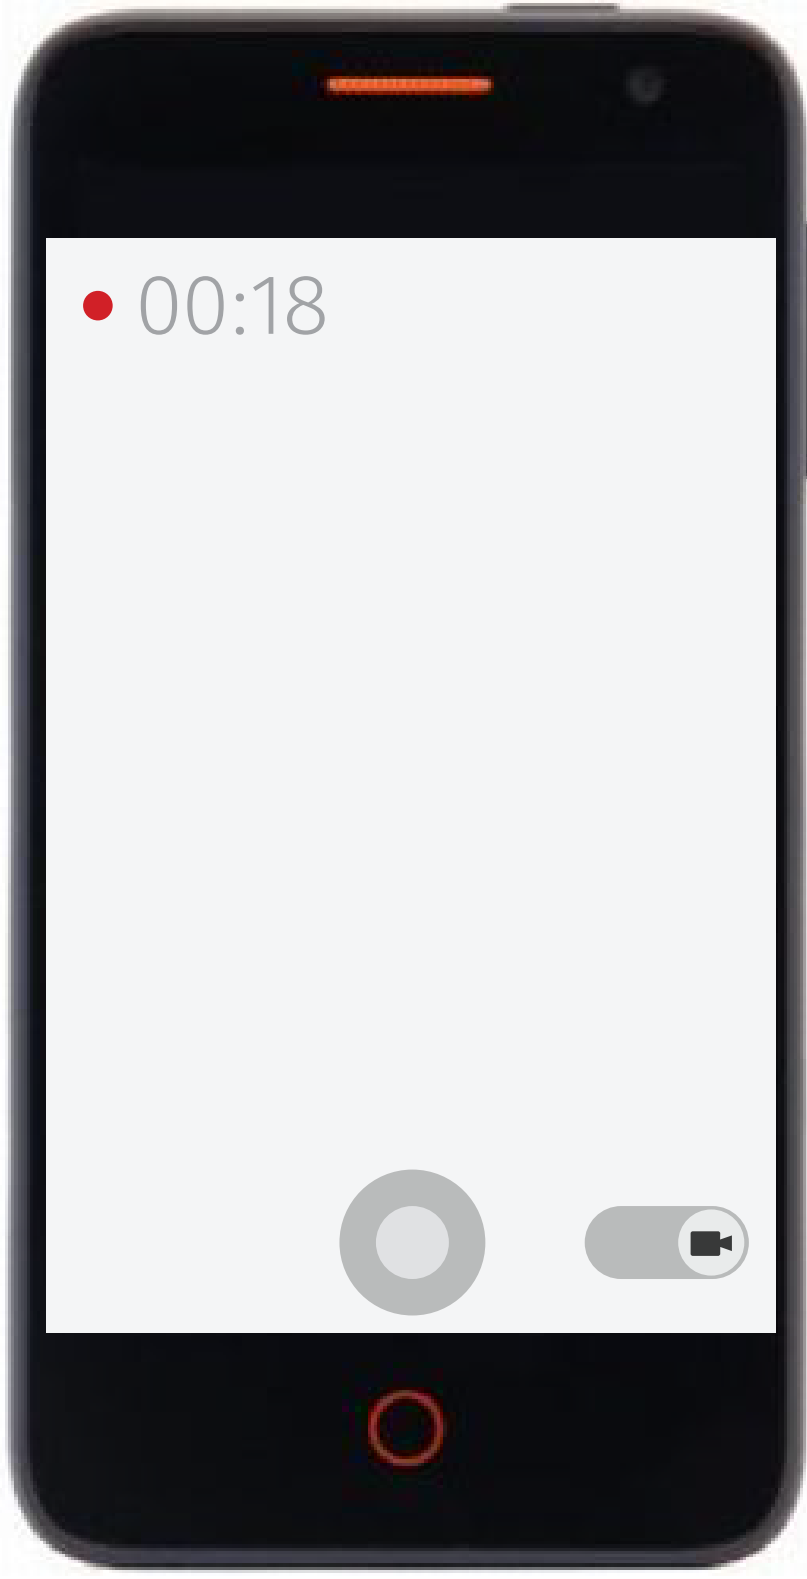

Hit either volume up or down.

2. Viewfinder

Preview is dismissed and user is returned to the viewfinder. Mode is retained.

3. Start Recording

Tapping volume key again begins recording.

# Thanks!
